

K-GROUPS IN THE THEORY OF SYMMETRIC SPACES

Wend Werner

Münster University, Germany

wwerner@uni-muenster.de

The structure of symmetric spaces is very well encoded into an algebraic structure closely related to C^* -algebras. Using this relationship to define K-theory for (hermitian, non-compact) symmetric spaces permits to replace root systems by K-groups in their classification. Classification beyond well-known results exist for inductive limits.

Joint work with Dennis Bohle (Amsterdam).
